

# ProTeus IV

The CMMS Technology Leader

## Audit Trail

The Audit Trail application is an add-on to ProTeus, designed to track any and all changes made to ProTeus work orders. Companies regulated by the FDA or those requiring ISO certification find this tool helpful, as these companies are required to produce accurate audit trails detailing the creation, modification, or deletion of certain records, in this case, work orders.

### Features

- An Audit Trail enables companies to determine who altered a work order and when it was altered, which provides optimal protection against malicious attacks on the system.
- Helps companies comply with ISO certification or FDA Validation Requirements of 21CFR 11.

©2004 Eagle Technology, Inc. All rights reserved. Eagle Technology has a policy of continuous product improvement, it reserves the right to change specifications and design without notice.

Eagle is one of the only software providers that allows companies to compile an Audit Trail that follows changes made to work orders, giving inspectors accurate documentation of each alteration in the system. ProTeus tracks the ID of the user, what fields are altered, what changes are made to values, and the date and time of the change.
