

# ProTeus IV

The CMMS Technology Leader

## M-Site

Multi-Site (or M-Site) helps by improving company-wide data access. It is a client based application designed for organizations with multiple plants, facilities, campuses or locations. ProTeus users with M-Site can enter any database installed on their corporate LAN, WAN or Intranet. This user would then have the ability to function as any local client would, including accessing reports and transactions.

### Features

- M-Site is ideal for enterprise businesses with multiple sites nation or worldwide.
- Visit our web site for a slideshow presentation of ProTeus. Visit [www.eaglecmms.com/downloads](http://www.eaglecmms.com/downloads).

Is one plant out of a hard-to-find part? With M-Site, you can search the inventories of every other facility instantly. Does a general manager need maintenance reports from factories in five different countries? M-Site puts the information at his fingertips.

M-Site supports global operations with multi-language and multi-currency support.
